Signature: _____ Date: _____

I certify that the information submitted is correct and I shall adhere to the terms and conditions of this rebate. I authorize Stowe Electric to confirm the information I submitted before receiving my rebate. Return to rebates@stowelectric.com.

General Questions and Standards

SED recommends hiring a licensed electrician to install your charging station. When consulting with the electrician, some questions to ask:

- ◎ Do I need to upgrade my electrical service?
- ◎ Do I need to bring underground electrical service and conduit to the location?
- ◎ Will there be other make ready work to prepare the location for charging stations?
- ◎ Is ventilation required (if within a parking garage or structure)?
- ◎ What's the charging level (level 2 or level 3)?
- ◎ How much does installation cost?
- ◎ What is the quality of cellular service at the location?
- ◎ What billing mechanism does the charger offer?

Stowe recommends the following standards:

- ◎ Adding dedicated safety or security lighting
- ◎ Adding dedicated parking spots that are lined and only available for electric vehicles
- ◎ Keeping station access free from ice, snow, and other debris
- ◎ Separately metering the charger(s)

Level 2 (240 volts)

- ◎ increases the charge power two to four times and decreases the typical full charge time for a battery electric vehicle to four to eight hours.
- ◎ Could require a new dedicated circuit from the electric panel to a wall location near the charging spot.
- ◎ Consult with a licensed electrician to verify that your building has the appropriate electrical service.

Level 3 (480 -1000 volts)

- ◎ Direct current fast chargers are the quickest charging infrastructure.
- ◎ Can charge a vehicle as quickly as in 30-45 minutes.
- ◎ Requires separate infrastructure, metering, and a transformer.
- ◎ Consult with a licensed electrician and charging company to verify that your location is suited for hosting a fast charger.

Stowe Electrical service requirements: check with SED staff regarding

- ◎ If the service meter needs to get relocated to improve service
- ◎ If the increased electrical load will require a transformer upgrade

Qualifying Rebates

	Eligible for Connected Homes	Ineligible for Connected Homes
Level 2 home charger	\$100	NA
Level 2 public charger	\$500	\$250
Level 2 workplace charger	\$500	\$250
Level 2 multi-family charger	\$500	\$250
DC fastcharger	NA	\$1,000

General Terms & Conditions

This rebate is for the installation of a qualifying Level 2 or Level 3 charging station(s) installed at the service address of an SED customer. The program prioritizes devices that can be enrolled into Connected Homes by offering an enhanced rebate for chargers manufactured by ChargePoint and Emporia. These devices must be WIFI compatible and capable of receiving alerts and sharing information with Connected Homes.

Customers are eligible for an additional incentive for enrolling their device into Connected Homes. This 'enrollment incentive' requires a customer to submit a separate rebate form.

Customers who install Level 2 or Level 3 chargers at municipal, commercial, or multi-family residential buildings are eligible for a rebate - even if the charger is not eligible for Connected Homes. Chargers located in parking lots must be accessible to the public, parking fees can be applied independently to access the charger.

This offer is not available for Level 1 charging infrastructure.

This offer is limited to four (4) Level 2 and/or Level 3 charging stations per customer. Level 3 charger rebates cannot receive an on-bill credit.

For more information: call DriveElectric 802-658-6060, or call Efficiency Vermont, 1-888-921-5990.
